

EXPERIMENT - 4

Student Name: Mohd Shahid

Branch: BE-CSE

Semester: 5th

Subject Name: ADBMS

UID: 23BCS10258

Section/Group: KRG_1-B

Date of Performance: 19/08/2025

Subject Code: 23CSP-333

- 1. Consider a relation R having attributes as R(ABCD), functional dependencies are given below:s**

$AB \rightarrow C, C \rightarrow D, D \rightarrow A$

Identify the set of candidate keys possible in relation R. List all the set of prime and non-prime attributes.

Ans:

Closure of {A, B}:

$(AB)^+ = \{A, B\} \rightarrow \{A, B, C\} \rightarrow \{A, B, C, D\}$

Therefore, {A, B} is a candidate key.

Closure of {B, C}:

$(BC)^+ = \{B, C\} \rightarrow \{B, C, D\} \rightarrow \{A, B, C, D\}$

Therefore, {B, C} is a candidate key.

Closure of {B, D}:

$(BD)^+ = \{B, D\} \rightarrow \{A, B, D\} \rightarrow \{A, B, C, D\}$

Therefore, {B, D} is a candidate key.

Candidate Keys: {A, B}, {B, C}, {B, D}

Prime Attributes: {A, B, C, D}

Non-Prime Attributes: None

- 2. Relation R(ABCDE) having functional dependencies as :**

$A \rightarrow D, B \rightarrow A, BC \rightarrow D, AC \rightarrow BE$

Identify the set of candidate keys possible in relation R. List all the set of prime and non prime attributes.

Ans:

Closure of $\{A, C\}$:

$(AC)^+ = \{A, C\} \rightarrow \{A, C, B, E\} \rightarrow \{A, B, C, D, E\}$

Therefore, $\{A, C\}$ is a candidate key.

Closure of $\{B, C\}$:

$(BC)^+ = \{B, C\} \rightarrow \{B, C, D\} \rightarrow \{A, B, C, D\} \rightarrow \{A, B, C, D, E\}$

Therefore, $\{B, C\}$ is a candidate key.

Check singletons and smaller sets (quick):

$A^+ = \{A, D\}$

$B^+ = \{B, A, D\}$

$C^+ = \{C\}$

$D^+ = \{D\}$

$E^+ = \{E\}$

None are keys.

Candidate keys: $\{A, C\}$, $\{B, C\}$

Prime attributes (appear in some key): $\{A, B, C\}$

Non-prime attributes: $\{D, E\}$

3. Consider a relation R having attributes as R(ABCDE), functional dependencies are given below:

$B \rightarrow A, A \rightarrow C, BC \rightarrow D, AC \rightarrow BE$

Identify the set of candidate keys possible in relation R. List all the set of prime and non prime attributes.

Ans:

Closure of $\{A\}$:

$(A)^+ = \{A\} \rightarrow \{A, C\} \rightarrow \{A, C, B, E\} \rightarrow \{A, B, C, D, E\}$

Therefore, $\{A\}$ is a candidate key.

Closure of $\{B\}$:

$(B)^+ = \{B\} \rightarrow \{B, A\} \rightarrow \{B, A, C\} \rightarrow \{B, A, C, E\} \rightarrow \{A, B, C, D, E\}$

Therefore, $\{B\}$ is a candidate key.

Quick check of other singletons:

$C^+ = \{C\}$

$D^+ = \{D\}$

$E^+ = \{E\}$

None are keys.

Candidate keys: $\{A\}, \{B\}$

Prime attributes: $\{A, B\}$

Non-prime attributes: $\{C, D, E\}$

4. Consider a relation R having attributes as R(ABCDEF), functional dependencies are given below:

$A \rightarrow BCD, BC \rightarrow DE, B \rightarrow D, D \rightarrow A$

Identify the set of candidate keys possible in relation R. List all the set of prime and non prime attributes.

Ans:

Relation R(A,B,C,D,E). FDs: $A \rightarrow B C D, BC \rightarrow D E, B \rightarrow D, D \rightarrow A$

Closure of $\{A\}$:

$(A)^+ = \{A\} \rightarrow \{A, B, C, D\} \rightarrow \{A, B, C, D, E\}$

Therefore, $\{A\}$ is a candidate key.

Closure of $\{B\}$:

$(B)^+ = \{B\} \rightarrow \{B, D\} \rightarrow \{A, B, C, D\} \rightarrow \{A, B, C, D, E\}$

Therefore, $\{B\}$ is a candidate key.

Closure of $\{D\}$:

$(D)^+ = \{D\} \rightarrow \{A, D, B, C\} \rightarrow \{A, B, C, D, E\}$

Therefore, $\{D\}$ is a candidate key.

(For reference) Closure of $\{B, C\}$:

$(BC)^+ = \{B, C\} \rightarrow \{B, C, D, E\} \rightarrow \{A, B, C, D, E\}$

$\Rightarrow \{B, C\}$ is a superkey but not minimal (B alone is a key).

Candidate keys: $\{A\}$, $\{B\}$, $\{D\}$

Prime attributes (appear in some key): $\{A, B, D\}$

Non-prime attributes: $\{C, E\}$

5. Designing a student database involves certain dependencies which are listed below:

$X \rightarrow Y$

$WZ \rightarrow X$

$WZ \rightarrow Y$

$Y \rightarrow W$

$Y \rightarrow X$

$Y \rightarrow Z$

The task here is to remove all the redundant FDs for efficient working of the student database management system.

Ans:

Step 1 — ensure single attribute on RHS

(All FDs already have single RHS; no splitting needed.)

Step 2 — remove redundant FDs

1. Test $Y \rightarrow X$ for redundancy:

Compute $(Y)^+$ using other FDs (exclude $Y \rightarrow X$):

$(Y)^+ = \{Y\} \rightarrow \{Y, W\}$ (by $Y \rightarrow W$) $\rightarrow \{Y, W, Z\}$ (by $Y \rightarrow Z$) $\rightarrow \{Y, W, Z, X\}$ (by $WZ \rightarrow X$)

$X \in (Y)^+$ even without $Y \rightarrow X \Rightarrow Y \rightarrow X$ is redundant \rightarrow remove it.

2. Test $WZ \rightarrow Y$ for redundancy:

Compute $(WZ)^+$ using other FDs (exclude $WZ \rightarrow Y$):

$(WZ)^+ = \{W, Z\} \rightarrow \{W, Z, X\}$ (by $WZ \rightarrow X$) $\rightarrow \{W, Z, X, Y\}$ (by $X \rightarrow Y$)

$Y \in (WZ)^+$ even without $WZ \rightarrow Y \Rightarrow WZ \rightarrow Y$ is redundant \rightarrow remove it.

3. Re-check remaining FDs for redundancy / extraneous LHS attributes:

Remaining FDs: $X \rightarrow Y$, $WZ \rightarrow X$, $Y \rightarrow W$, $Y \rightarrow Z$.

- None of $X \rightarrow Y$, $WZ \rightarrow X$, $Y \rightarrow W$, $Y \rightarrow Z$ is implied by the others.
- For $WZ \rightarrow X$, test W (or Z) extraneous: $(Z)^+ = \{Z\}$ and $(W)^+ = \{W\}$
— neither gives X , so both W and Z are needed.

Final minimal set of FDs

$X \rightarrow Y$

$WZ \rightarrow X$

$Y \rightarrow W$

$Y \rightarrow Z$

6. Debix Pvt Ltd needs to maintain database having dependent attributes ABCDEF. These attributes are functionally dependent on each other for which functionally dependency set F given as:

$\{A \rightarrow BC, D \rightarrow E, BC \rightarrow D, A \rightarrow D\}$

Consider a universal relation $R1(A, B, C, D, E, F)$ with functional dependency set F , also all attributes are simple and take atomic values only. Find the highest normal form along with the candidate keys with prime and non-prime attribute.

Ans:

Step 1 — Closures

- $A^+ = \{A\} \rightarrow \{A, B, C\} \rightarrow \{A, B, C, D\} \rightarrow \{A, B, C, D, E\}$
 $A^+ = \{A, B, C, D, E\}$ (F missing)
- $(A, F)^+ = \{A, F\} \rightarrow \{A, B, C, D, E, F\}$
 $(A, F)^+ = \text{all attributes} \Rightarrow \{A, F\}$ is a key.

Observation:

- A never appears on RHS $\Rightarrow A$ must be in every key.

- F never appears on RHS \Rightarrow any key must include F.
 \Rightarrow every key must contain A and F. Since AF is a key and minimal, AF is the only candidate key.

Step 2 — Prime / Non-prime

- Candidate key(s): {A, F}
- Prime attributes (in some key): {A, F}
- Non-prime attributes: {B, C, D, E}

Step 3 — Highest Normal Form

- 1NF: satisfied (atomic attributes).
- 2NF: fails because $A \rightarrow B, C, D$ (A is proper subset of candidate key AF) gives partial dependency of non-prime attrs on part of the key.
- Therefore highest NF = 1NF.

Final:

- Candidate key: {A, F}
- Prime attributes: {A, F}
- Non-prime attributes: {B, C, D, E}
- Highest normal form: 1NF (not in 2NF due to $A \rightarrow B, C, D$).
